

# What's New in CDP 3.0

The CDP 3.0 range of products represents the next generation in R1Soft high-performance backup software. Redesigned from the ground-up, CDP 3.0 is built on all-new Disk Safe® technology. Made to withstand crashes and power loss – an industry first – the CDP 3.0 Disk Safe is fully portable. Open, close, and copy your Disk Safe across servers; your backups go wherever you need them to. What's more, CDP 3.0 reduces backup windows to mere minutes, with minimum impact to disk I/O.

For maximum data protection and disaster recovery, choose R1Soft Continuous Data Protection® (CDP) 3.0.

## Which Edition is Right for You?

All editions of CDP 3.0 are multi-platform and incorporate the latest in R1Soft (CDP)® technology to provide fast, reliable, and cost-effective disk-based server backup.

CDP 3.0 Standard

CDP 3.0 Advanced

CDP 3.0 Enterprise

### Overview

Customers looking to protect 1-5 servers. Ideal for hosting providers that offer customer-managed server backup.

Customers looking for MySQL and MS SQL data protection and Bare-Metal Restore. Ideal for hosting providers that offer customer-managed server backup services.

Customers looking for a centrally-managed backup solution; CDP Enterprise Edition allows a user to manage backups for 30+ physical or virtual servers from one central interface.

(All 3 versions work on Windows and Linux OS)

### Benefits

Protect One Server per Install
